(a) Bounds on guessing
Exact-string success probability
2^{0}
2^{-5}
2^{-10}
2^{-15}
2^{-20}
2^{-25}
Universal upper bound $2^{-t/6}$
Explicit strategy β^{t}
0
30
60
90
120
Missing-qubit gap $t = k - m$
(b) Gap for target success
Integer missing-qubit gap
180
150
120
90
60
30
0
Sufficient: $\lceil 6u \rceil$
Necessary: $\lceil u/(-\log_2 \beta) \rceil$
0
10
20
30
Target strength $u = \log_2(1/\delta)$
